

Primary characteristics

NAF-Setball for MC-pulp is a ball sector valve with metal-to-metal seating and combines the best control characteristics of the ball valve and the butterfly valve. It can be used both as control valve and as shut-off valve and is available in flanged version. This valve type is developed for MC-pulp 8-19%. It has an enlarged outlet with one size bigger flange on the outlet to get an excellent flow characteristic for the MC-pulp out of the valve. It is available as standard in 1.4408/CF8M, CG8M and SMO254. Contact NAF for more information.

The valve has:

- a one-piece, leak-proof body.
- a ball sector with top and bottom bearings for low operating torque which makes it possible to use low-torque actuators.
- a V-shaped sector that provides accurate control over a wide range even at low flow rates and with MC-pulp (8-19%).
- a spherical area of the ball sector which, together with the seating sealing in alloy 6 and the design of the sealing package, ensures excellent tightness at both low and high differential pressure. The maximum leakage in the flow direction is less than 5×10^{-6} of the Kv value.
- PTFE lined stem bearings.
- The seat ring in alloy 6 is spring loaded against the ball sector.
- Stem sealing with o-ring or v-ring packing in PTFE.
- NAF standard for mounting the actuator, which simplifies installation and gives a compact valve/actuator unit.

CE-marked according to Pressure Equipment Directive (PED 97/23/EG) module H, category III.
For module H1, category IV contact NAF

Applications

NAF-Setball can be used both as control valve and as shut-off valve and is developed for applications with MC-pulp 8-19%. It is primarily used for mounting directly on the flange of the MC-pump and on pulp distributors.

The valve is designed to give the MC-pulp a good flow through the valve. It represents a concrete result of our product philosophy which is focused on functionality, high quality and low life cycle costs, and is based on concentrating our range to a limited number of valve types, but all of them suitable for a wide variety of applications.

Technical specification for standard design

Material:	EN 1.4408
Size range:	DN 80-300
Pressure ratings:	PN 16, 25 and 40 ANSI Class 150 and 300
Max. differential pressures:	
Valve closed	25 bar DN 80-300
Control service	25 bar DN 80 15 bar DN 100-150 10 bar DN 200-250 8 bar DN 300 See also page 2
Valve design:	ANSI B 16.34 and EN 12516
Installation methods:	Flanged
Temperature range:	-30 - 250°C
Test pressure:	1.5 x PN with valve open. IEC 534-4 Class IV-S1 with valve closed
Sealing class:	Testing medium is water. Seat in alloy 6

Working pressure, differential pressure and temperature

The maximum working pressure and temperature in the body depend on pressure class according to respectively flange standard. Max. differential pressure, valve closed, depends on temperature as shown in the diagram and is valid for all sizes. Max. differential pressure for control service and for sizes DN 100-300 depends on size and temperature as shown in the diagram.

Max working pressure

Accessories

NAF's pneumatic actuators, see data sheet Fk74.59 can be equipped with a large number of accessories.

The following are included in NAF's standard program and are suitable for direct mounting to NAF pneumatic actuators.

Valve positioner

Pneumatic and electro-pneumatic valve positioner, see data sheet Fk41.82.

Intelligent valve positioner, see data sheet Fk41.85.

Solenoid valves

See data sheet Fk79.17.

Filter regulator

Can be delivered (part no. 79-SMC-AW20K-F02CE-C).

Electrical position indication

See data sheet Fk79.10.

Terminal box

The actuator can be equipped with a junction box (part No. 349 20 930) of cast aluminium containing terminal blocks for connecting the solenoid valve and position sensors.

Fugitive emissions Approval, EN ISO15848-1

NAF has certified some of our valves with a new stem sealing, according to EN ISO 15848-1 (this new standard will replace the old TA-luft standard). The packing box solution is with a V-ring set. The new packing set is live loaded with spring cups and equipped with an o-ring above the stem packing. Following valves have been certified in the first test.

Classification according to test results is

ISO-FE BH - CC1 - SSA0 - t200°C PN25

Classification classes:

BH Tightness class B, test fluid Helium
 CC1 20000 mechanical cycles, 2 thermal cycles.
 SSA0 Without shaft seal adjustments during test
 T200°C Temperature Class
 PN25 Endurance Class.

Certified Products

Flanged :
